Abstract
This study aims to describe the planting of Islamic values through a scientific approach in early childhood. This research was descriptive with qualitative research belongs to the type of case studies conducted in Raudatu Aisyiyah Athfal kelurahan, kecamatan Wale Wolio languages City Baubau, Southeast Sulawesi. Aspects that are studied are internalizing the values of islam to cultivate gratitude as a creature of God's creation and care for the environment, through the stages of scientific approaches, namely: to observe, ask yourself, menalar, try, and communicate. Researchers acted as a means of collecting the data, and using the tools in the form of guidelines for observation and interview guidelines are summarized in the form of the note field and tools documentation. The results showed that the cultivation of the values of islam through a scientific approach in early childhood can be done by providing knowledge and experience in early childhood, beginning with shows the power of the Almighty God who created living things, cultivate a sense of gratitude for existence and benefits of the creatures of his creation, as well as how to treat the creature creation.

Keywords: Scientific, RA, Islam, Aisyiyah
Introduction

Education is old and the construction shown in children from birth up to the age of six through the awarding of educational stimulation to help the growth and development of physical and spiritual so that children have preparedness in entering education continue. old and learning program is designed with the aim to develop the whole child's abilities or potential (the whole child) (suyatno, 2003). One of the characters uses the old IE 2013 curriculum learning thematic scientific approach. Learning to achieve spiritual and social attitudes done indirectly, through conditioning and example. A positive attitude is formed when the child will have the knowledge and make it happen in the form of the work or performance.

Scientific approach to learning is learning that requires every step of the process of learning, based on scientific facts and empirical (Kusnadi, 2006). In addition, scientific approach also emphasizes on increasing the skills of early childhood menalar. Children are directed to find out from various sources through observation and not just told. Children will learn to experiment, explore and investigated the surrounding environment so that it is able to build a knowledge attitude and with a deep impression.

Scientific approach meant to improve early childhood creativity in order to know the science through the environment. Through this approach, the gratitude of early childhood can be grown as a creature of Allah's creation, play while learning to understand and care about the environment. This was the forerunner of the formation
of noble morals similar with old and educational purposes in view of islam that is implanting Islamic values to the children early on. Thus the child will have the morals of noble and commendable attitude.

Scientific approach to research that has been done, among others, against the results of the study of biology (Marjan, et al., 2014); learning bahasa indonesia (Bintari, et al., 2014); learning IPS (Goddess & Mukminan, 2016); IPA (Wahyuni, 2016); development of modules for IPA (Ali et al., 2015) and the development of learning mathematics (Rusnilawati, 2016). Research on early childhood that have been reported include the internalization of social and cultural values through creative mathematics learning (Jamiah and Yulis, 2012); internalization of the values of the Islamic religion in the construction of the morals of noble (Nasihin, 2015); cultivation of moral values (Murdiono, 2007; Setiawati and arifin, 2015); character education (Suyatno, 2012) and the cultivation of discipline (Aulina, 2013). Therefore, this research uses the scientific approach to instill Islamic values in early childhood.

Research Methods

This research is a descriptive qualitative belongs. Aspects to be reviewed is the internalization of Islamic values foster a sense of gratitude as the sentient creation of God and care for the environment, through a scientific approach is spelled out in some processes i.e. observing, questioning, associating, experimenting and networking. The technique of collecting data through observation, interview and documentation. Data analysis techniques include the reduction of data,
display data and tethering conclusion.

Results And Discussion

Learning activities to instill Islamic values with a scientific approach on early childhood in Baubau Town Aisyiyah RA conducted for 6 (six) days each in the outline of its activities consists of several steps: opening, the core activities and cover as shown in table 1 below.

Table 1.Planting Activities of Islamic values with Scientific Approach

Based on table 1 of the aforementioned in mind that learning activities in imparting Islamic values with scientific approach generally is divided into: the opening activities, activities cover and core activity. Opening activities intended to help build interest in children and gives an overview of the core activities. At the start of this activity embedded basic knowledge about good morals against plants and animals as well as about the living being who needs no creature alive.

The activities cover done with discuss and pray that aims to repeat back what was done at the time of opening and activity, instilling good habits after learning, as well as the interests of the child to learn the next day.

Core activity is focused to do scientific approach measures namely: observe, ask yourself, menalar, try, and communicate. In this case, do some scientific activities related materials, namely: (1) observations of the metamorphosis frog, (2) observation of the growth of mung bean sprouts, and (3) observations of ecosystems. The selection of materials is based on several considerations, namely: the theme of learning, children experience in everyday life, the ability of researchers to provide firsthand experience, and kebermanfaatannya. This is in accordance with the opinion of the Asmariani (2016) that
the more concrete disciples studying teaching materials, for example through direct experience, the many are the experience acquired. Instead the more abstract pupils gained experience, for example, rely solely on verbal language, then the less experience to be gained.

The first stage in the scientific approach is observed (observing), which is observing with attention to the things that are important from an object or objects. In this research, early childhood metamoforsis frog observing and observed the process of the growth of mung bean sprouts. The cultivation of the values of islam at this stage is to show to the early childhood about the existence of God Almighty who created animals namely frogs and plants i.e. mung bean sprouts and turn it on.

The second phase in this scientific approach is to ask yourself, i.e. submission of questions about observation objects. In this research, early childhood related ask various questions the results of his observations. The cultivation of the values of islam at this stage is to cultivate a sense of gratitude for existence and benefits of the beings of creation God Almighty through the answers when asked. In addition, children are invited to compare, classify and do measurement. This will help the child to enter the scientific stage next.

The third stage is menalar, that is, processing the information already collected. When children begin to be able to compare, classify and perform the measurement, then the child process information i.e. match the knowledge already possessed by a new experience that he obtained. In this study, one example is child menalar activities when
children begin to be able to associate a frog will eat if many large-sized laron.

The fourth stage is tried, that experiment. Children will record stronger results of his studies when he was given the opportunity to conduct experiments themselves as an exciting new experience while self-reliance. The cultivation of the values of islam at this stage is more emphasized to how to treat with good creature of God Almighty, as holding frogs with soft and watered plants with enough water and do not use excessive water.

The fifth stage is communicating, that communicate what has been learned. Related to this research, the child can express in language and showed his work to friends and teachers.

Summary

Scientific approach in imparting Islamic values in early childhood can be done through several stages, namely: to observe, ask yourself, menalar, try, and communicate. Planting the Islamic values can be done by providing knowledge and feeling good at the early childhood, beginning with shows to early childhood about the existence of God Almighty who created living things, cultivate gratitude will the existence and benefits of the beings of creation God Almighty, as well as how to treat a good creature of God Almighty.

Thanks

Thanks we pass on to the leadership of the Assembly higher education research and Development Center Chairman of

ISTAWA: Jurnal Pendidikan Islam
Muhammadiyah which has provided research grants muhammadiyah 21st century period 2017, head of RA and teachers who have supported the Aisyiyah This research and of course the Aisyiyah students took us nostalgia into a little child again.
